

Four-Channel Volume Controller

TS-9106M

Description:

TS-9106M is an excellent audio adjustment device. It connects to central controller via RS-232 serial port to achieve the stereo adjustment of volume and mute.

Feature:

- * Volume control module for 4 channels independent audio channel.
- * Support balanced line-level audio input / output.
- * The panel includes a keypad, and it supports manual control with LED indicator.
- * Control Methods: It not only works with programmable central controller by R232 protocol , but also full supports third-party devices.

Specifications:

Model	TS-9106M
Input Port	5.8 European Terminal supports balanced line-level audio input
Output Port	5.8 European Terminal supports balanced line-level audio output
Input Impedance of Volume Channel	680Ω
Output Impedance of Volume Channel	10Ω Total Harmonic Distortion : -85dB
Noise	-85dB
Input Level	2VPP
Sound Channel Separation	-90DB Mute: -104dB
Uniformity	80Hz-16KHz ±0.2dB
Attenuation Range	0-76DB (Non mute, Maximum)
Frequency Response	80Hz-16KHz (-3DB Minimum)
Power Specification	AC110-240V 50/60Hz
Dimension(L×W×H)	484×209×44(mm)
Weight	3.22Kg
Power Consumption	1.8W
